

JACK KELLY

Data & Analytics Leader — Data Governance · Applied AI · Business Intelligence

Appleton, WI • (419) 722-9319 • jackkellywsu@gmail.com • linkedin.com/in/jackkellywsu

PROFESSIONAL SUMMARY

Data and analytics leader with **11 years at Nielsen** and a proven record of turning high-cost business problems into working technical solutions. Combines subject-matter expertise in how the business operates, the technical judgment to structure, clean, and govern raw data at scale, and the ability to encode both into semantic layers and prompt frameworks that put AI to work on trusted data. Solutions include a business intelligence suite serving **400+ users**, work automation equal to **22 full-time call center agents**, and **\$2.7M** in identified annual value. Recognized with two of the company's top honors, including the **Arthur C. Nielsen Award**, its highest global distinction.

CORE COMPETENCIES

Data Governance & Quality Canonical dataset ownership · data standards & documentation · automated quality guardrails · compliance metric design · external audit readiness (Ernst & Young / MRC)

AI & Emerging Technology Prompt & semantic engineering · LLM workflow design · agentic development (KIRO) · Claude, Gemini, Glean, NotebookLM · MCP configuration · AI-assisted QA and enrichment

Analytics & BI SQL · Alteryx · Tableau · Looker · Power BI · Postgres · BigQuery · Databricks · Hive/Presto · GitLab · Python (foundational) · propensity modeling

CRM & Platforms Salesforce — queue architecture, triggered outbound messaging, work routing · APIs · vendor evaluation & tool-spend advisory

PROFESSIONAL EXPERIENCE

NIELSEN Remote, U.S.

Aug 2015 – Present

Business Intelligence Lead / Senior Data Analyst II — Research & Analytics

2022 – Present

- Own the curated, canonical, single-source-of-truth datasets used across the business, built by translating Nielsen's raw, unstructured datalake into trusted tables supporting analysis, platform builds, and operational rules.
- Encoded that expertise into semantic layers, prompt frameworks, and MCP connections to those datasets, turning an agentic KIRO workflow into a working analyst. **Cycle time fell from one to two months to under five days**; the protocols onboarded the full team.
- Built the Business Intelligence Console, a permissioned single source of truth serving **400+ users** across five departments; retired **100+** conflicting reports and set the BI standard for Audio and international panels.
- Modeled which human contact-center work could be performed digitally, then built the Salesforce automation to do it. Digital labor now performs work equal to **22 FTE** and **59%** of weekend output, lifting on-time issue resolution **8%** while recurrence fell **21%**.
- Built a prioritization model scoring open issue records by business impact, SLA risk, and predicted contact likelihood, then rebuilt it as a dynamic Salesforce queue that eliminated **800** territory assignments and guaranteed **100%** priority compliance.
Circle of Excellence Award, 2022 — for exceeding performance targets and driving impactful BI product development.

Executive AI Task Force — one of four team subject-matter experts redirected in 2026 to the company's highest-cost problems.

- Identified approximately **\$2.7M** in annual recurring value in panelist acquisition by scoring prospective addresses against data the business already held, and by sourcing the hardest-to-recruit demographic from adjacent panels where participants had already consented.
- Went from problem statement to presented analysis in **one week**, against a baseline of multiple two-week sprints, because the AI context and semantic groundwork already existed.

Regional Quality Lead

2019 – 2022

- Core analytics contributor to the executive recovery team that regained Nielsen's **Media Rating Council accreditation** after data quality failures cost the company its accredited status.
Arthur C. Nielsen Award, 2021 — the company's highest global honor.
- Detected a fraudulent reporting pattern manual assessment had missed, then designed the recurrence analysis that automated national detection of it, still in production.
- Replaced sampled manual auditing, **30–40** assessments per lead monthly against roughly **1,000** field reps, with analytics-driven risk targeting covering the full population at lower cost, self-teaching Alteryx to build the compliance measures, Looker dashboards, and BigQuery pipelines behind it.

Field Representative

2015 – 2019

- Managed **two** field areas across three states, twice the standard assignment, against installation, quality, and attrition targets. Deployed to Houston, San Antonio, and Boston to stabilize underperforming markets.

EDUCATION

M.S., Business Intelligence — University of Arkansas Grantham, 2022 · 4.0 GPA, graduated with honors

B.A., International Relations — Wright State University, 2015
